

Dermaplaning

Dermaplaning immediately rejuvenates the skin by removing the outermost layer of dead skin cells and vellus hair. It is also highly effective in minimizing the appearance of fine lines, wrinkles and acne scars, while leaving skin smooth, supple and vibrant. It is great for prepping the skin prior to peels and enzyme treatments and to increase penetration of active ingredients. It creates the perfect canvas for makeup application and is the go-to treatment for high profile occasions.

Dermaplane Facial Fact:

Everyone has a dead layer of skin cells and vellum hair. This layer absorbs many of the products we use, keeping it from getting to the layers we want it to. This treatment eliminates that problem, giving your skincare regimen a chance to really work.

What it does:

The dermaplaning facial treatment removes the outermost layer of skin cells that are dead. This reduces the appearance of acne scars, wrinkles, fine lines and other problem areas and keeps your outermost layer healthy.

Combining it with other services:

Dermaplaning can be added on to most skincare treatments. We see effective results when combining dermaplane with our medical grade chemical peels; it improves the quality and effectiveness of a treatment.
